FE Challenge

The challenge will consist in developing the UI of the images that are in attachment.

- The 1 and 2 images (Employees List) is mandatory to be implemented.

- From the other 4 images, you can choose the ones you want to implement, but at least one of them should be implemented.

- You can also see the screens in this [Figma File](#)

This means, your application needs to have at least 2 different screens.

In attachment we also send a folder structure with the files that are mandatory to use.

#1. You should rename the folder adding with your name. `eg: project-antonio_silva;`

#2. You should use this folder as your base directory, and it should work with just "Right Click on the index.html" and "Open with Google Chrome".

#3. In terms of styling you follow [BEM CSS](#) best practices as much as possible.

#4. You can use any framework or preprocessor as you like, but it needs to work as mentioned in #2.
